

# Cambridge Audio Stream Magic iOS App Connection Guide

## [Setting up the Stream Magic App for Internet only discovery](#)

Note: This method may be useful if you think that a router setting or firewall is blocking your Stream Magic App from finding the product on the network.

- 1) Uninstall app
- 2) Re install Stream Magic App - Once installed, **do not open!**
- 3) Go into **iOS settings** page and scroll to the bottom and find the 'Stream Magic' settings page and set the sliders and switches as shown below:

\* Please note any changes to these settings will only take affect once the app is restarted.

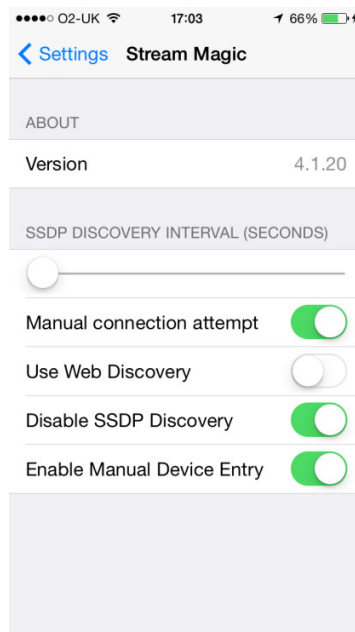

- 5) Make sure the Stream Magic device is switched on and connected to the same network as the iOS device
- 6) Open the Stream Magic App
- 7) Your Stream Magic device should appear in the device list

## Setting up the Stream Magic App for Manual Device discovery

Note: This method should work if all else fails, however it is a slightly more complicated method; it bypasses the automatic collection of details needed about your device from our connection server.

- 1) Uninstall app
- 2) Re install Stream Magic App - Once installed, **do not open!**
- 3) Go into iOS settings page and scroll to the bottom and find the 'Stream Magic' settings page and set the sliders and switches as shown below:

\* Please note any changes to these settings will only take affect once the app is restarted.

- 5) Make sure the Stream Magic device is switched on and connected to the same network as the iOS device

6) Open Safari on your iOS device (connected to the same network) and go to the link below:

<http://upgrades.uuvol.com/cgi-bin/lookup-ip>

You should hopefully get some text in the browser window that looks a little like this:

```
<lookups>
<lookup serial="000xxxxx" internalip="xxx.xxx.xxx.xxx" udn="xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxxx"
mac="xxxxxxxxxxxxx"/>
</lookups>
```

7) Open the Stream Magic App

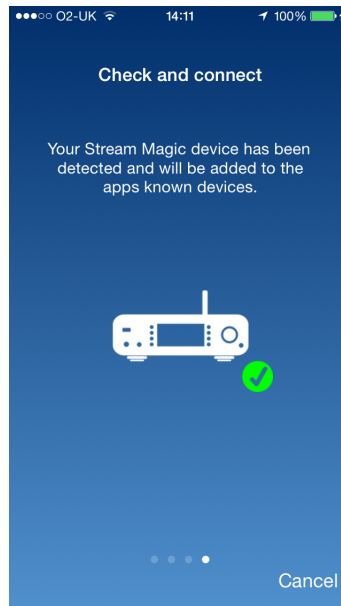

8) Press the '+' symbol at the top right of the 'Devices' screen and follow the instructions, swiping left through each page entering the settings as requested

The information required is included in the browser window:

IP address = **internalip**

Unique Device Descriptor = **udn**

9) Once complete you should see a screen similar to the one below

10) Press 'Cancel' and your product should be in the device list.
